5750 Almaden Expressway
San Jose, CA 95118-3686

Dear Valley Water Board:

I support Valley Water's efforts to expand the use of recycled and purified water with the Purified Water Project. By investing in water supply projects to produce advanced purified water to augment our local water supplies, Valley Water is protecting and securing our future.

Climate change and aging infrastructure both local and statewide threaten our water supply resources. Purified water helps protect us against these challenges as a sustainable, drought-resistant water source that is locally controlled.

I had the opportunity [to tour/ take a virtual tour of] the Silicon Valley Advanced Water Purification Center, where I learned about the state-of-the-art, multi-stage advanced technologies that produce highly purified water. These advanced processes produce high-quality, clean water that meets and even exceeds state and federal drinking standards. I support the use of advanced purified water to bolster our drinking water supplies.

Valley Water's Countywide Water Reuse Master Plan is a collaborative, long-term solution for addressing our county's water needs while providing regionwide benefits. By recycling water, we are less reliant on precipitation for our region's water needs. Water Reuse is a sustainable local water management strategy that helps reduce our dependency on imported water and cut back on energy and environmental costs of transporting outside water supplies.

Thank you for continuing to pursue this viable new water supply for Santa Clara County. Please add my name to the list of agencies, organizations and individuals who support this critical program that ensures the reliability of our water supply, economy, and the health and safety of our citizens through proactive water resource planning.

Sincerely,
